Maintenance & Service Contracts For Solar PV And Hot Water Systems

IGS solar service and maintenance contracts are a powerful tool for keeping your solar system performing in “like-new” condition for years to come.

- Residential and commercial solar system service contracts available
- Service contracts available for both solar hot water and solar electric (PV) systems
- Plans cover both routine maintenance and checks as well as emergency support & repair

Simple Maintenance Pricing

Solar maintenance contracts are available from IGS for a simple annual price. Our typical service and maintenance plan costs 1% of your solar system price per year.

When properly designed and installed, solar hot water and electric systems require very little maintenance. However, periodic checks will help keep your system performing in tip-top shape for years to come. Let the same IGS professionals who put in your solar system ensure its performance year after year.

Service And Maintenance

Typical Maintenance Tasks

- Inspect solar panels / collectors for damage
- Check for and address any shading issues
- Remove debris and clean solar panels / collectors
- Inspect the mounting systems
- Check system inverter / controllers
- Inspect / clean electrical components
- Inspect electric / piping connections
- Monitor system performance and output
